I am resending this newsletter as some people had difficulties finding the 14 page PDF download. Please click on the blue highlighted area below to open the document. If you have any difficulties, please do not hesitate to contact me at office@nightingale.ca.

Nightingale's March and April 2021 Newsletter

Please copy any part of this letter to your M.E. patient friends, M.E. Associations or physicians. You have our permission to use any part of this newsletter.

Free Download (14 Page PDF) click below:
[An Introduction For Physicians and Patient*](#)

[Subscribe](#)[Past Issues](#)[Translate ▼](#)[RSS](#)

Item 1: Dear readers, thank you so much for your ongoing support in our efforts to sell the book Understanding Myalgic Encephalomyelitis. We still need to sell about 380 copies just to cover our cost, but with your support we know it's possible. Please spread the word. The book is available at nightingalepress.ca, amazon.com and amazon.ca.

Item 2: Free consultation with Dr. Hyde for any patient who purchases a copy of Understanding M.E. You can obtain a free 15-minute SKYPE or Face Time interview with Dr. Hyde to answer your personal question. After purchase of our book at nightingalepress.ca just contact our office and office@nightingale.ca to book an appointment.

Item 3: How to Understand Segami Brain SPECT on M.E. and toxic chemical injury patients. At the request of many M.E. patients and their physicians, they have requested that I send them more information on Segami brain SPECT. This newsletter contains information on having a brain Segami SPECT performed on M.E. patients. This is not just important; it is essential to for any physician to understand the location and degree of the brain injuries following the various enterovirus infections which give rise to either polio or M.E. I suggest you have this document printed out on a colour printer.

Many of the patients who believe they have M.E. have brain injuries from either infections of chemical or toxic brain injury. The knowledge of how much injury the brain has suffered will go a long way to obtaining a disability pension. This brain injury information is not available in either an MRI or CT scan. If you do not have a hospital or clinic with Segami software in their department, just do an HMPAO SPECT and the image can easily be transferred to a location that has the software.

Item 4: Any donations to Nightingale Research Foundation will be highly appreciated. We need donations to keep the Foundation operating.

Please stay safe from CORONA 19. Obtain your immunization as soon as possible.

Best wishes.

Byron M. Hyde M.D.
